## EDUCATION

### Chandigarh Engineering College

*B.Tech in Artificial Intelligence and Data Science*

Landran, Punjab

*Expected 2026*

- **Coursework:** Data Structures & Algorithms, OOPs, DBMS, Operating Systems, Computer Networks.

## EXPERIENCE

### Camouflex

*Backend Intern*

Remote

*Jul 2025 – Dec 2025*

- **Database Optimization:** Improved backend performance by optimizing SQL queries with **composite indexing** in PostgreSQL, reducing query time by **90% (100ms to 10ms)**.
- **Authentication System:** Built a secure login system using **JWT and Redis**, keeping session management separate from core business logic for better scalability.
- **Handling High Traffic:** Developed a cart management feature that handles **1000+ concurrent requests**, using database transactions to prevent errors during simultaneous updates.
- **API & Deployment:** Designed REST APIs for data retrieval and used **Docker** to containerize the application for easier deployment across different environments.

### Infowiz

*Software Engineer Trainee*

Chandigarh, India

*Jun 2024 – Jul 2024*

- **Access Control (RBAC):** Implemented Role-Based Access Control to secure admin routes and protect sensitive user data within the CMS platform.
- **Real-Time Features:** Integrated a Backend-as-a-Service (BaaS) solution to enable real-time data syncing via **WebSockets**, speeding up the development process by **40%**.

## PROJECTS

### Realtime Device Tracker | *Node.js, Express.js, Socket.io, Leaflet, AWS*

- Built a live **location tracker** using **WebSockets (Socket.io)** to share device coordinates between users with less than 100ms delay.
- Integrated **Leaflet.js** (OpenStreetMap) to visualize user movements on a map, optimizing updates to ensure the UI remains smooth during frequent changes.
- Implemented an event-based system to handle user connections, automatically removing markers when a user disconnects to keep the map clean.

### CashTrack - AI Financial Analytics | *TypeScript, Next.js, PostgreSQL, Gemini AI*

- Designed a structured database schema using **PostgreSQL** and **Drizzle ORM** to manage complex relationships between users and transactions.
- Used **Gemini AI** to convert plain text inputs into structured JSON data, allowing the app to automatically categorize financial expenses.

## TECHNICAL SKILLS

**Languages:** C++, JavaScript (ES6+), TypeScript, SQL, Python, Java

**Backend & Cloud:** Node.js, Express.js, Microservices, WebSockets, gRPC, Docker, AWS (EC2, S3)

**Databases & Messaging:** PostgreSQL, MySQL, MongoDB, Redis, Kafka

**DevOps & Tools:** CI/CD Pipelines (GitHub Actions), Git/GitHub, Nginx, Linux, Postman

## ACHIEVEMENTS

- Secured **500+ marks** in AMCAT assessment.
- Solved **300+ Data Structures & Algorithms** questions.
